

Machine Side Filter Unit

- Remove chips from your sump without shutting your machine down.
- Convenient portable filter cart can be moved around to any machine.
- Filter your fluids quickly at 25 gallons per minute.
- Filtering capability from 1 micron to 200 micron, with a variety of filter styles.

The Machine Side Filter Unit is a portable filter cart that can be easily moved from machine to machine. It is effective in reducing the amount of particulate circulating in the machine sump. With regular fluid maintenance, you can extend the life of your coolant and help minimize coolant waste.

The heavy-duty filter vessel is available in aluminum or stainless steel. The aluminum cart is light weight and corrosion resistant for long service life. The double diaphragm pump is powered by compressed air, so no electricity is needed. It can pump up to 25 gallons per minute, so filtering takes minutes, not hours. The filter cart has foam filled tires, instead of the standard air filled tires, that will not go flat from sharp chips.
